

Java Order of Operations - Challenge

Name: _____

Evaluate each expression and write the final value of `result` . Show your work.

```
int a = 14;
int b = 2;
boolean c = false;
boolean result = (a / b + 2 >= 7 - 1 || 3 * 4 <= 11) && !(a / b == 7 && a - b != 12) || c;
```

```
int x = 15;  
int y = 4;  
boolean z = true;  
boolean result = x - 3 * y > 2 && (8 / y + 1 >= 4 || z) && !(x / 3 == 5 && 8 - y < 5) || 6 + 2 != 8;
```
