

# CS101 Quiz 3 - Practice - Answers

## Covers:

- Anything From **Lab3Variables**
- Assignment Operators: See slides **2/3-User-Input**
- Any word on the CS101 Github [“vocabulary.md”](#) file

## During Quiz:

- NO NOTES

Use the code below to answer questions 1 - 3:

```
public class arithmetic {  
    public static void main(String[] args) {  
        double x = 4.0;  
        double y = 10.0;  
        double z = (x * y) / 2.0 - 5.0;  
        System.out.println(z);  
  
        x = x - 1.0;  
        x = 233.5;  
        y -= 1.0;  
    }  
}
```

1. (2pts) If we run this code, what will be printed to the console?

**15.0**

2. (2pts) What is the value of “x” when the program completes?

**233.5**

3. (2pts) What is the value of “y” when the program completes?

**9.0**

4. (3pts) Define the following for the line of java code:

```
float price = 34.3f;
```

Variable name:

**price**

Variable type:

**float**

Initialization value:

**34.3**

5. (1pts) Which of the following best describes a **Java Primitive**?

**A) A basic built-in data type that stores a simple value directly in memory**

B) A more complex data type that stores a reference to data in memory and has methods and properties

C) A universal character encoding standard that supports characters from all writing systems

D) Converting a value from one data type to another
