

CS101 Quiz 8 - Practice

1. (2pts) Define the following for this method:

```
public static void hello(String yourName) {  
    System.out.println("Hello " + yourName);  
}
```

Method Name:

Parameter Names:

Return Type:

Parameter Types:

2. (2pts) Define the following for this method:

```
public static double fToC(double tempInF) {  
    return (tempInF - 32) * 5.0 / 9.0;  
}
```

Method Name:

Parameter Names:

Return Type:

Parameter Types:

3. (2pts) Define the following for this method:

```
public static int randomIntBetween(int lowest, int highest) {  
    int range = highest - lowest + 1;  
    int randomInt = (int)(Math.random() * range) + lowest;  
    return randomInt;  
}
```

Method Name:

Parameter Names:

Return Type:

Parameter Types:

4. (1pt) What does this code print?

```
public static int square(int n) {  
    return n * n;  
}  
public static void main(String[] args) {  
    int result = square(5);  
    System.out.println(result);  
}
```

- A) 25
- B) 10
- C) 5
- D) square(5)

5. (1pt) What does this code print?

```
public static void greet(String name) {  
    System.out.println("Hello, " + name + "!");  
}  
public static void main(String[] args) {  
    greet("Alice");  
}
```

- A) Hello, name!
- B) Hello, Alice!
- C) greet Alice
- D) Alice

6. (1pt) What does this code print?

```
public static int multiply(int a, int b) {  
    return a * b;  
}  
public static void main(String[] args) {  
    int result = multiply(multiply(2, 3), 2);  
    System.out.println(result);  
}
```

- A) 7
- B) 10
- C) (2, 3), 2
- D) 12

7. (1pt) What does this code print?

```
public static boolean isPositive(int num) {  
    return num > 0;  
}  
public static void main(String[] args) {  
    int myNum = -7;  
    if (isPositive(myNum)) {  
        System.out.println("Number " + myNum + " is positive!");  
    }  
}
```

- A) Number -7 is positive!
- B) Number 7 is positive!
- C) Nothing is printed
- D) Number myNum is positive!

8. (1pt) What does this code print?

```
public static int mystery(int a, int b) {  
    if (a > b) {  
        return a - b;  
    } else {  
        return b - a;  
    }  
}  
public static void main(String[] args) {  
    System.out.println(mystery(3, 8));  
}
```

- A) 5
- B) -5
- C) 11
- D) Compile error

9. (1pt) Define "Argument".

- A) A variable listed in a method's definition that acts as a placeholder
- B) The actual value passed to a method when it is called
- C) The data type a method sends back to the caller
- D) A named, reusable block of code that performs a specific task
